

Run Nemotron 3 Ultra FREE In Your Terminal

The full breakdown from the reel: grab a free NVIDIA NIM API key, hook it into OpenCode, and you're running NVIDIA's open agentic model end to end.

What you need: a terminal + a free NVIDIA account. No GPU or payment needed for the hosted API.

1 Grab your FREE NVIDIA NIM API key

Head to the model page and sign in with a free NVIDIA account:

build.nvidia.com/nvidia/nemotron-3-ultra-550b-a55b

Click 'Get API Key' (or 'Build with this NIM') to copy your key.

Your key starts with: nvapi-xxxxxxx

2 Install OpenCode (one-liner)

On macOS / Linux (or Windows via WSL), drop this into your terminal:

```
curl -fsSL https://opencode.ai/install | bash
```

Prefer npm instead?

```
npm i -g opencode-ai
```

3 Link NVIDIA to OpenCode

Open your project folder and launch it:

Docs: opencode.ai/docs

```
opencode
```

Inside OpenCode, type /connect, pick NVIDIA, and paste your nvapi- key.

4 Select the model & start building

Type /models and choose Nemotron 3 Ultra from the list:

```
/models -> nvidia/nemotron-3-ultra-550b-a55b
```

Drop in a prompt and watch it plan, code, test, and debug on its own:

```
build a premium landing page with a glossy 3D object
```

Follow @TechnoPoison so the DM goes through.

Save it, run the 4 steps, ship your first agent build today.

OPTIONAL — CONFIG FILE METHOD (SKIP THE MENUS)

Rather edit a file directly? Create or update `~/.config/opencode/opencode.json` with the block below, then launch opencode and pick the model via `/models`.

```
{
  "$schema": "https://opencode.ai/config.json",
  "provider": {
    "nvidia": {
      "npm": "@ai-sdk/openai-compatible",
      "name": "NVIDIA NIM",
      "options": {
        "baseURL": "https://integrate.api.nvidia.com/v1",
        "apiKey": "nvapi-YOUR_KEY_HERE"
      },
      "models": {
        "nvidia/nemotron-3-ultra-550b-a55b": {
          "name": "Nemotron 3 Ultra",
          "limit": { "context": 1000000, "output": 16384 }
        }
      }
    }
  }
}
```

GOOD TO KNOW

- Endpoint base URL is always: `https://integrate.api.nvidia.com/v1`
- Model id to select: `nvidia/nemotron-3-ultra-550b-a55b`
- Open agentic model (550B / 55B active), up to a 1M-token context window.
- Free to try on NVIDIA's hosted API — trial terms and usage limits apply.
- Model missing from the list? Re-run `/models`, or restart OpenCode after `/connect`.

Save it. Share it. Follow for more free AI tool guides.
